INTRODUCTION

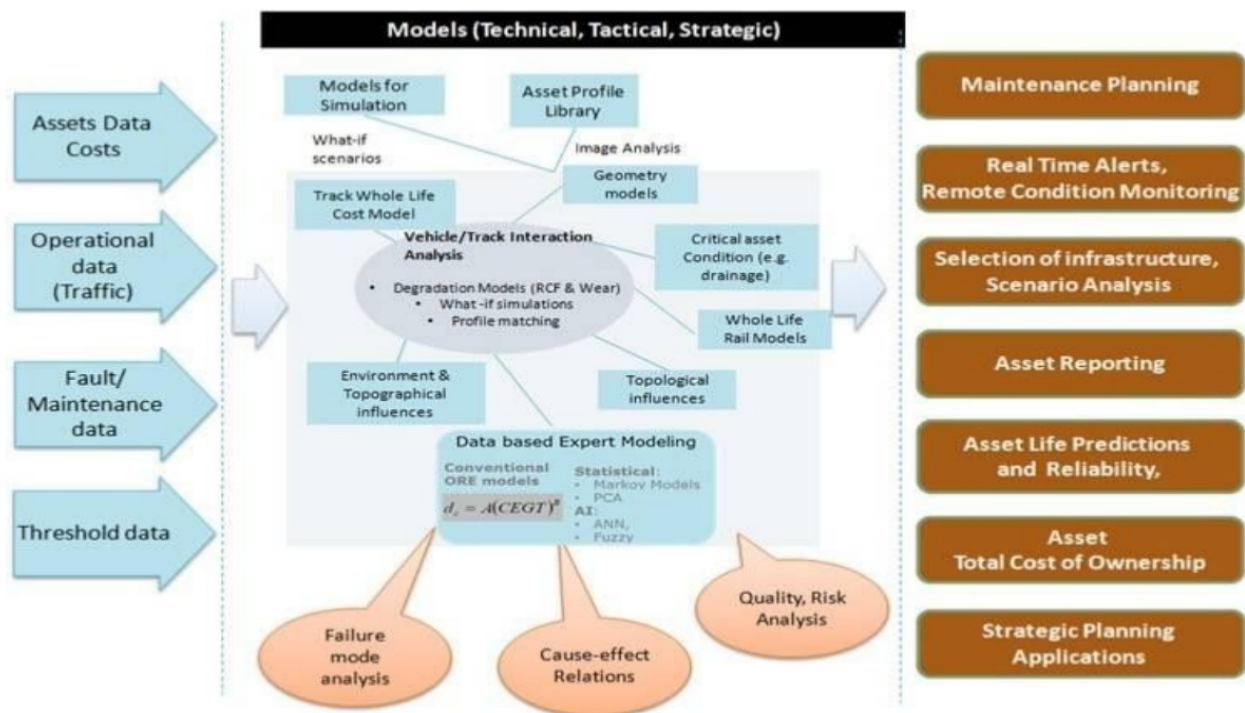

The Indian Railways has a capital base of about Rs. 100000 crores and is often referred to as the lifeline of the Indian economy because of its predominance in transportation of bulk freight and long distance passenger traffic. The network crisscrosses the nation, binding it together by ferrying freight and passengers across the length and breadth of the country. As the Indian economy moves into a high growth trajectory the Railways have also stepped-up developmental efforts and are preparing themselves for an even bigger role in the future.

a.OBJECTIVES:

- Ports serve as an important link in global supply chain. The Indian Railways has a capital base of about Rs.100000 crores and is often referred to as the lifeline of the Indian economy because of its predominance in transportation of bulk freight and long distance passenger traffic. Data analytics can be used for analyzing the port performance.
- In this project, the port capacity topic was addressed through Cog nos analysis. Reducing the congestion on rail corridors and improving port-connectivity.

- Railways have also stepped-up developmental efforts and are preparing themselves for an even bigger role in the future. So, data analytics plays the major role in this project.

b.PROJECT FLOW:

LITERATURE SURVEY

a.References

Paper 1:

A systematic Analysis of Port Capacity Literature: Trends and Future Research
Avenues Publication year:31 January ,2021 Author name: Cecil-Miguel Journal
name: Journal of maritime transport & logistics Summary: The continuous
growth in the world economy, technology, and the population still shapes the
industrialization patterns. This massive progress has also shaped the
international transportation requirements. Ports, as the one of the important
infrastructure in international transportation and supply chains, have been
pushed by these changes in terms of structuring their capacities to satisfy the
demand. To do this, this study adopted a systematic literature review and
content analysis together. The result of this study showed that the most
attractive topics are service level and performance in main category.

Paper-2:

Performance analysis of major ports in India: A quantitative approach

Publication year: January ,2016 Author name: Anindita-Man dal Journal name:

International Journal of Business Performance Management Summary: The

paper examines the performance of 13 major ports of India in respect of key

operational performance indicators. Following rapid economic growth India's

share in international trade is escalating. This puts increased pressure on

these ports, which handle many of the trade to perform with optimal

efficiency. The study presents a systematic analysis of different performance

indicators for a 10 yr time period (2003 to 2013) using a variety of statistical

methods and evaluates status of each port in different categories of

performance.

Paper 3:

Analytics for Decision Making at Ports Publication year: October ,2015 Author

name: Mrinal Markup Dupattas Journal name: publishing India Summary:

Ports serve as an important link in global supply chain. The Indian Union has endeavored to invest on major ports of the country to meet up to the global standards. The major ports lost its share to the minor ports under the state governments. This paper an attempt has been made to identify the dimensions of port performance and the causality between the dimensions. It chooses to take average turn round time (ATRT) as an indicator of port performance. The paper proposes an analytical framework to identify the causality that would aid the decision makers

Paper-4:

Towards Analytics-Enabled Efficiency Improvements in Maritime Transportation: A Case Study in a Mediterranean Port Publication year: 21 June ,2019 Author name: Pierluigi Zerbino Journal name: Department of Energy, Systems, Territory and Construction Engineering Summary: The current digitization trend, the increased attention towards sustainability, and the spread of the business analytics call for higher efficiency in port operations and for investigating the quantitative approaches for maritime logistics and freight transport systems. Process mining enabled enhancements in the overall export time length, which might improve the vessels' turnover

and reduce the corresponding operational costs, and supported the potential re-design of performance indicators in process control and monitoring.

Paper 5:

Dimensions of the Port Performance: A Review of Literature Publication year: 25 August ,2020 Author name: Bucak, U., Ba saran Journal name: Journal of ETA Maritime Science Summary: The port performance has frequently been studied in the academic literature, and the first studies on the subject are focused on financial or operational dimensions. However, today, port performance has become multi-dimensional due to the changing roles of the ports to its stakeholders, and the fact that local competition has been replaced by global competition through continuously developing routes, etc. Within this study, it is aimed to determine each dimension of the port performance concept which had been handled as a multidimensional process in recent years in literature. So, the concept of port performance had been divided into four basic dimensions which are operational, financial, sustainable, and logistics.

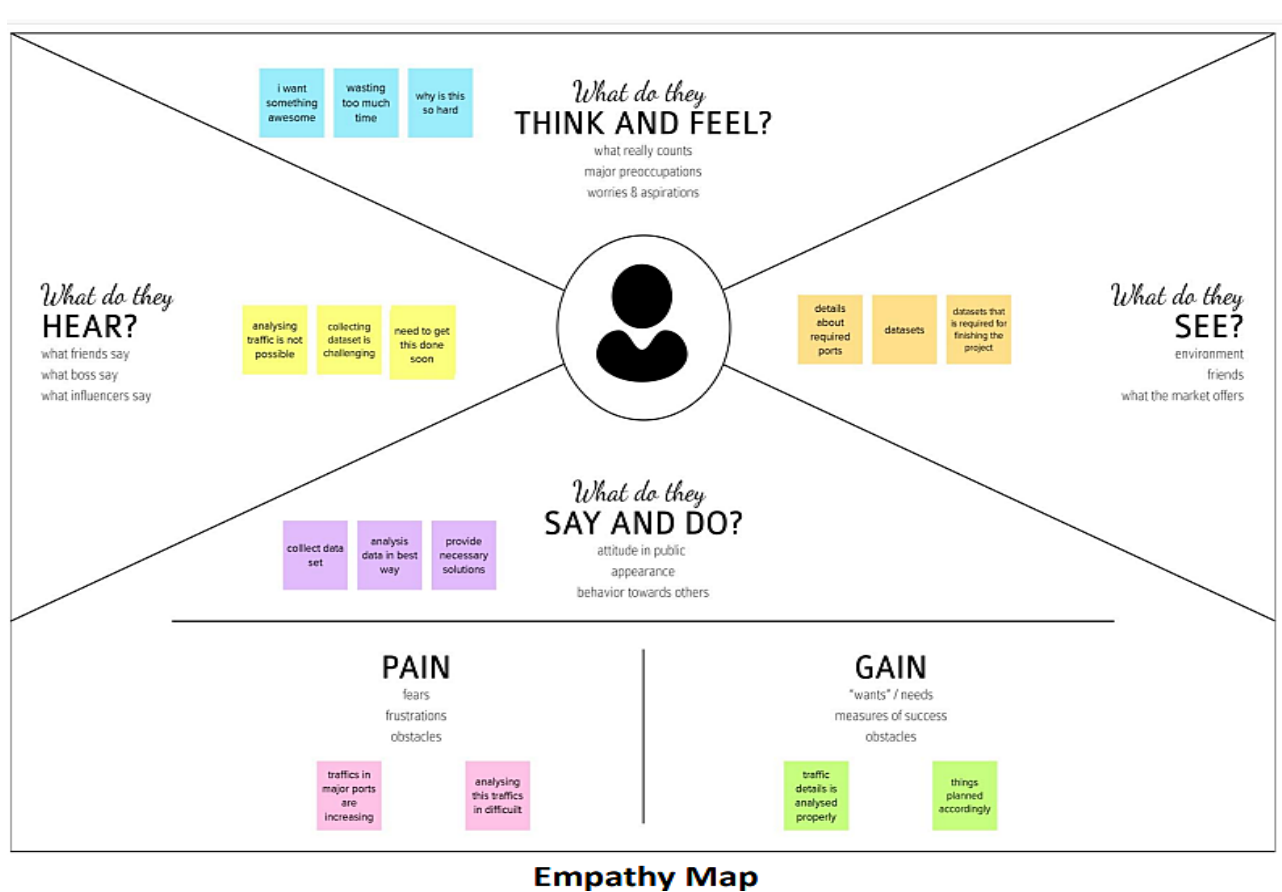

b.Problem Statement Definition

This aims at developing a Machine Learning Model for Traffic analysis for major ports. The Indian Railways has a capital base of about Rs. 100000 crores and is often referred to as the lifeline of the Indian economy because of its predominance in transportation of bulk freight and long distance passenger traffic. The network crisscrosses the nation, binding it together by ferrying freight and passengers across the length and breadth of the country. As the Indian economy moves into a high growth trajectory the Railways have also stepped-up developmental efforts and are preparing themselves for an even bigger role in the future at the same time it became hard to analyze traffic in major ports and our project helps to overcome that problem.

| QUESTION | DESCRIPTION |
|-----------------------------------|---|
| Who does the problem affect? | Indian railways |
| Why is it important? | As Indian railway play major role in Indian economy it is important to analyze the traffic in major ports |
| What are the benefits? | <ul style="list-style-type: none"> • AI along with ML model • Automatic Prediction • Data Analysis |
| How is it better than the others? | Faster Processing of data with higher accuracy and optimized model. |
| When to use? | Scenarion where we want to analyze the traffic in major ports. |

IDEATION & PROPOSED SOLUTION

a. Empathy Map Canvas

b.Ideation & Brainstorming

Step-1: Team Gathering, Collaboration and Select the Problem Statement

The screenshot displays a Miro board titled "Brainstorm & idea prioritization" with a blue vertical bar on the left labeled "Template". The board is divided into three main columns for a brainstorming session.

Column 1: Introduction and Preparation

- Icon:** A lightbulb with a plus sign inside a circle.
- Title:** **Brainstorm & idea prioritization**
- Description:** Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.
- Time/People:** 10 minutes to prepare, 1 hour to collaborate, 2-8 people recommended.
- Feedback:** A button labeled "Share template feedback".

Column 2: Before you collaborate

- Icon:** A plus sign in a circle.
- Title:** **Before you collaborate**
- Description:** A little bit of preparation goes a long way with this session. Here's what you need to do to get going.
- Time:** 10 minutes.
- Steps:**
 - A. Team gathering:** Define who should participate in the session and send an invite. Share relevant information or pre-work ahead.
 - B. Set the goal:** Think about the problem you'll be focusing on solving in the brainstorming session.
 - C. Learn how to use the facilitation tools:** Use the Facilitation Superpowers to run a happy and productive session.
- Action:** A button labeled "Open article" with a right arrow.

Column 3: Define your problem statement

- Icon:** A number 1 in a circle.
- Title:** **Define your problem statement**
- Description:** What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorm.
- Time:** 5 minutes.
- Example:** A box labeled "INCLUDE" with the text: "How might we [Port rail connectivity is a strategic element of port development]?"
- Key rules of brainstorming:** To run a smooth and productive session:
 - Stay in topic.
 - Encourage wild ideas.
 - Defer judgment.
 - Listen to others.
 - Go for volume.
 - If possible, be visual.

Bottom Bar:

- Left:** A button labeled "Need some inspiration?" with a right arrow.
- Right:** A button labeled "Open example" with a right arrow.

Step-2: Brainstorm, Idea Listing and Grouping

2 Brainstorm

Write down any ideas that come to mind that address your problem statement.

⌚ 10 minutes

TP

You can select a sticky note and hit the pencil (switch to sketch) icon to start drawing!

1 Syed Akmal Junaid S A

| | | |
|---|--|---|
| The infrastructure development & capacity augmentation of major ports is a profligate process | Increases in all form cargo, container port fees are used for other things | Modernization of the port for way of use of latest system of crane and other things |
| Business using railway ports can easily track | Adequate resources will be provided | Reduces the congestion on rail corridors |
| Productivity in the transportation of bulk freight | The cargo capacity of major ports remained under utilized over the period | The Indian ports have handled 10 and 70% respectively |

2 Subramanian P

| | | |
|--|--|--|
| Major ports provide information on total cargoes in and out | Traffic at each major port for each ship on each route | Capacity of major ports remained underutilized over the period |
| Traffic statistics are based on a combination of data reported to by port | Port has more a long way in terms of volume of traffic handled | The growth in traffic at major ports can be attributed to an increased |
| Transportation disruption and risk management for the vessel and inventory | Ports also provide quality services including the agent | The facts are thought to play a very good general indication of the overall significance |

2 Sakthi ganesh R

| | | |
|--|--|--|
| India's transport sector is large. Around 80% of the total of about 1.3 billion people | The management and policymaking powers are vested with the railway board | Without research, innovation, modernization and transport and related issues will be handled in priority |
| Transport markets of the region access to key infrastructure | The Railways maintain CONCOR's wagon fleet | The sector is still developing and it is easy to access future market dynamics of the market |
| Budget-friendly ports and increase our share in global transport | Indian Railways has provided land for construction of terminals | Passengers and Goods Origin - Destination survey |

4 Sundhreshwar V

| | | |
|--|--|---|
| Ports is mostly shaped by the levels and changes in global | Effects of capacity utilization are in the work limited to primarily | The most important for capacity in the modern trade on the sea |
| Used as input to most benefit analytics | To ensure smooth running of port operating | Determine capacity from a quality of service perspective |
| The correlation analysis is hard to perform | Indicator indicates traffic use of capacity | The performance indicators are good to describe the current status of the railway network |

3 Group ideas

Take time sharing your ideas while clustering similar or related notes as you go. In the last 10 minutes, give each cluster a sentence-like label. If a cluster is bigger than six sticky notes, try and see if you can break it up into smaller sub-groups.

⌚ 10 minutes

TP

Add sub-headers to sticky notes to make them more specific. Add sub-headers to sticky notes to make them more specific. Add sub-headers to sticky notes to make them more specific.

c.Proposed Solution

| S.No. | Parameter | Description |
|-------|--|--|
| 1. | Problem Statement (Problem to be solved) | The Indian Railways has a capital base of about 1 lakhs crores and is often referred to as the lifeline of the Indian economy. As it includes transportation of bulk freight and long-distance passengers, traffic and congestion on rail corridors becomes a major challenge. |
| 2. | Idea / Solution description | Data analytics can be applied to visualize freight transportation and congestion on rail corridors across major railway ports to get better insight of the working of port network and to improve the port connectivity. |
| 3. | Novelty / Uniqueness | Can also predict the time at which the particular train will arrive and depart. |
| 4. | Social Impact / Customer Satisfaction | Adequate resources will be provided for the customers regarding the arrival, departure and delay of the trains. |
| 5. | Business Model (Revenue Model) | Businesses using railway ports can easily track the trains. Government can use data analytics dashboard to ensure less traffic on the ports. |
| 6. | Scalability of the Solution | The solution can be used almost for all modes of transportation including the ships and so on. Thus it is scalable for almost all modes of transportation. |

d.Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why

Purpose:

- a. Solve complex problems in a way that fits the state of your customers.
- b. Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- c. Sharpen your communication and marketing strategy with the right triggers and messaging.
- d. Increase touch-points with your company by finding the right problembehavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- e. Understand the existing situation in order to improve it for your target group.

Template:

| | | | | |
|-------------------------|--|---|---|---------------------------|
| Define CS, fit into CC | 1. CUSTOMER SEGMENT(S) CS <p>The Central Government, which manages Indian Railways, will benefit most.</p> <p>The organization that routinely transports its goods</p> | 6. CUSTOMER CONSTRAINTS CC <p>The Indian railway system is a pillar of our economy. It's crucial to analyse those because it's challenging to manage traffic in those major ports.</p> | 5. AVAILABLE SOLUTIONS AS <p>Several interlocking device types were introduced. Interlocking manually: Relay, Telematics, Mechanical, and Human Electronic, free-wired relay automatic interlocking.</p> <p>Failure of the interlocking system can result in a collision.</p> <p>There are two types of ERTMS, the common signalling and communication system.(ATP) GSM-R ETCS (European Train Control System) (Global System for Mobile Communications - Railway)</p> <p>None of these options were effective enough.</p> | Capture AS, understand RC |
| | 2. JOBS-TO-BE-DONE / PROBLEMS J&P <p>Data analytics can help in reducing rail corridor congestion and enhance the port connectivity</p> <p>Effective analysis must be done of all the port traffic data.</p> <p>A critical part of port development is port-rail connectivity, both from an economic and competitive perspective and to minimize the adverse externalities on people and the environment.</p> | 9. PROBLEM ROOT CAUSE RC <p>1.Delay in transporting goods</p> <p>2. Loss for Industries</p> | 7. BEHAVIOUR BE <p>The customer is the one who sends their goods by train; they need to know if they will arrive safely. They also require the reputation of Indian Railways, which promotes growth for both parties.</p> | |
| Identify strong TR & EM | 3. TRIGGERS TR <p>Due to increased traffic, it was necessary to assess the capacity and traffic in key ports.</p> | 10. YOUR SOLUTION SI <p>Our Idea is to ask the details of their product and start destination with their given</p> | 8.CHANNELS OF BEHAVIOUR CH <p>8.1 ONLINE Customer can track their goods in their place</p> <p>8.2 OFFLINE After the product is reached their required destination Customer will be informed through a normal message which does 't required any network</p> | |
| | 4. EMOTIONS: BEFORE / AFTER EM <p>BEFORE:</p> <p>They were unhappy about their products.</p> <p>AFTER:</p> <p>They were at ease and felt safe. Transportation</p> | | | |

REQUIREMENT ANALYSIS

a.Functional requirement

Following are the functional requirements of the proposed solution.

| FR No. | Functional Requirement (Epic) | Sub Requirement (Story / Sub-Task) |
|--------|--|--|
| FR-1 | User Registration | Registration through Form Registration through Gmail Registration through LinkedIN |
| FR-2 | User Confirmation | Confirmation via Email |
| FR-3 | User Input Acceptance | The dashboard accepts user input by means of selecting the location of the ports. |
| FR-4 | Options for User to filter location of ports | The user can use filter options to view ports by countries. |
| FR-5 | Visualization of ports. | The dashboard provides various visualization techniques to understand the flow. |
| FR-6 | Providing Delay Information of trains. | The dashboard is able to provide the user the information like delay of a particular train to the ports. |

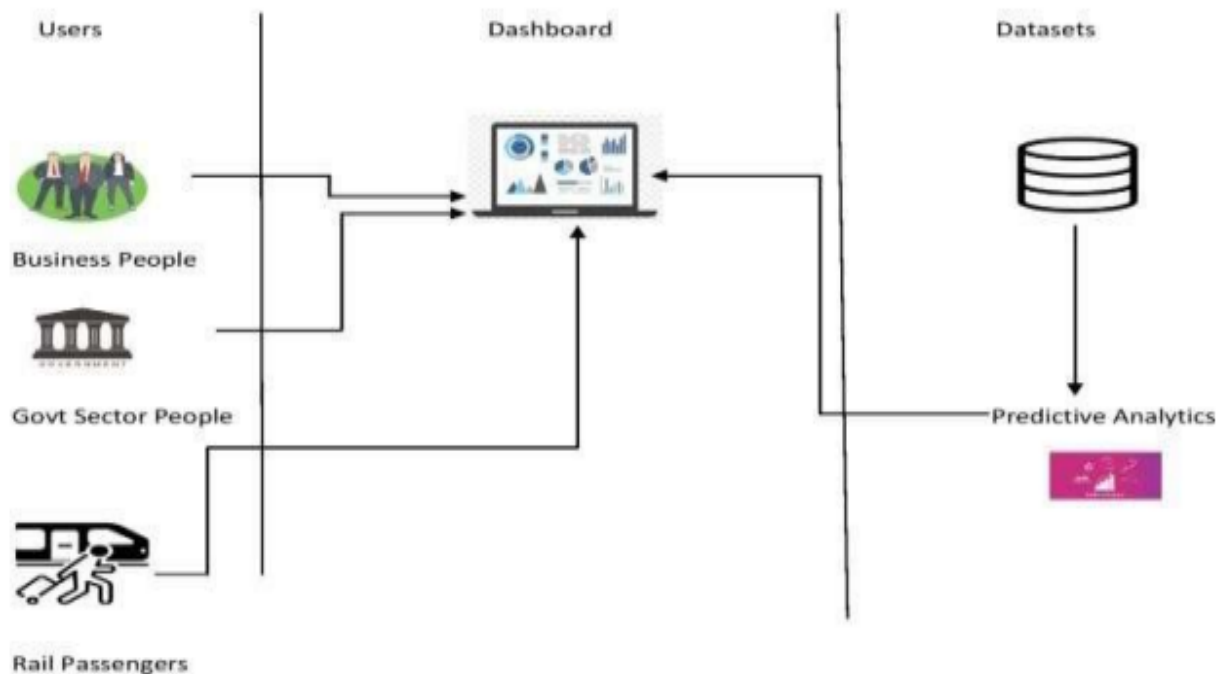

b.Non-functional Requirements:

| FR No. | Non-Functional Requirement | Description |
|---------------|-----------------------------------|---|
| NFR-1 | Usability | The dashboard is able to provide the users the consistency and the aesthetic they expect. The user can constantly use the dashboard without any flaw in the visual quality. |
| NFR-2 | Security | The dashboard is much secured that the data of the users are kept confidential and also it is not prone to any kind of attacks. |
| NFR-3 | Reliability | The failure rate is minimal and the failure can easily be rectified using the measures. Thus this makes the dashboard much reliable. |
| NFR-4 | Performance | The dashboard gives better performance. It provides the user a convenient and flexible User Interface. |
| NFR-5 | Availability | The dashboard is always available to serve the users. The availability is ensured in such a way that the user can access the dashboard any time anywhere. |
| NFR-6 | Scalability | The dashboard is highly scalable. It can withstand any increase or decrease of loads. |

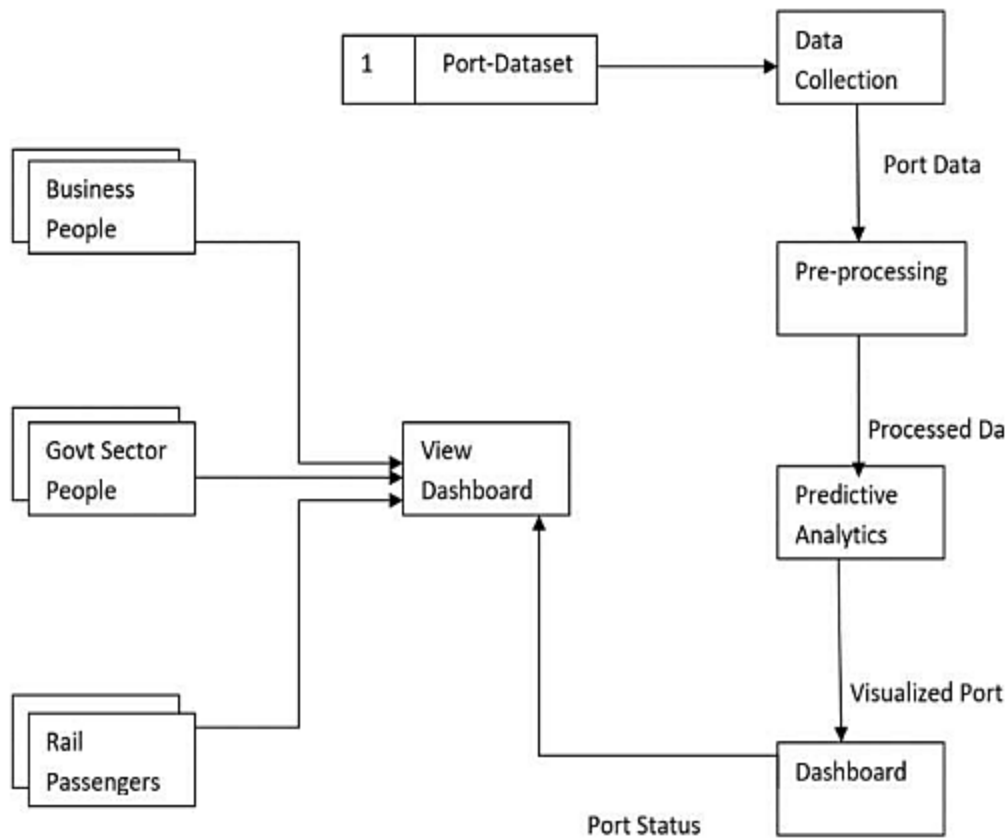

PROJECT DESIGN:

a.Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

- 1.) Predictive analytics will be done from collected dataset and it will be updated in dashboard.
- 2.) Business People can able to view the dashboard to track their goods.
- 3.) Govt Sector People can able to predict the congestion in ports by viewing the dashboard and it helps to avoid congestion in future .
- 4.) Rail Passengers can able to track the correct time of rail in ports.

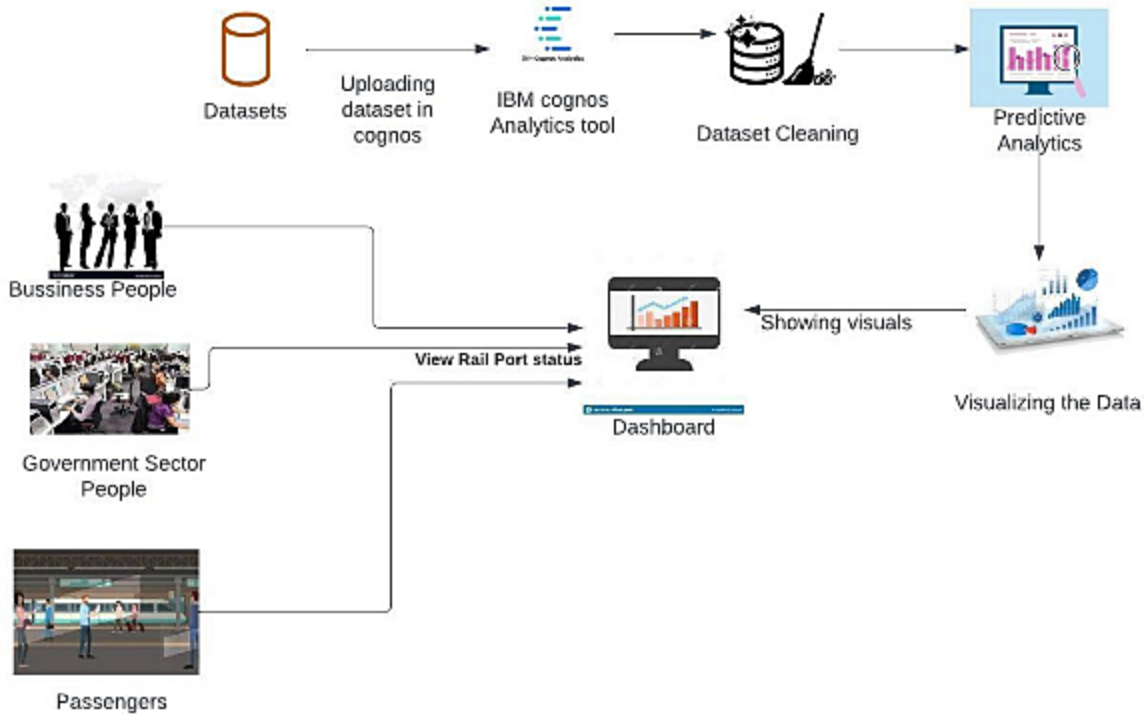

b.Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- i. Find the best tech solution to solve existing business problems.
- ii. Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- iii. Define features, development phases, and solution requirements.
- iv. Provide specifications according to which the solution is defined, managed, and delivered.

Solution Architecture Diagram:

c.User Stories:

Use the below template to list all the user stories for the product.

| User Type | Functional Requirement (Epic) | User Story Number | User Story / Task | Acceptance criteria | Priority | Release |
|--------------------------|-------------------------------|-------------------|--|--|----------|----------|
| Business People | Monitoring | USN-1 | As a user, I can view the dashboard to see the port status . | I can visualize the port status in dashboard. | High | Sprint-1 |
| | Tracking | USN-2 | As a user,I can track the goods. | I can track the goods by it's arrival/departure time | High | Sprint-1 |
| Government Sector People | Viewing | USN-1 | As a user,I can view the port status regularly | I can able to know the port status | Low | Sprint-2 |
| | Predicting | USN-2 | As a user,I will reduce the congestion in ports by predicting the port congestion through dashboard. | I can able to predict the congestion in future | High | Sprint-2 |
| Passengers | Tracing | USN-1 | As a user, I can trace the arrival/departure time of rail in ports. | I can able to track the correct time of rail. | High | Sprint-2 |

PROJECT PLANNING & SCHEDULING:

a.Prepare Milestone and Activity List

| DATE | MILESTONE | ASSIGNEE | STATUS | DESCRIPTION |
|------------|--|--|--------------|--|
| 31/08/2022 | Data Collection-Download dataset | Syed Akkeal Juniath S A Sakthi Ganesh R Subramanian P Sundhareshwar V | Completed | The dataset for Traffic and Capacity Analytics is to be collected. The dataset which is considered will have the port information |
| 7/09/2022 | Data Pre-processing 1.Renaming the column names 2.Preparing calculations 3.Checking for NULL values 4.Checking for outliers 5.Summarization of dataset 6. Label Encoding | Syed Akkeal Juniath S A Sakthi Ganesh R Subramanian P Sundhareshwar V | Completed | Preprocessing involves renaming the existing column names into meaningful ones, preparing calculations such as calculating traffic percent, checking for NULL values in the dataset. |
| 14/09/2022 | Visualizing the dataset | Syed Akkeal Juniath S A Sakthi Ganesh R Subramanian P Sundhareshwar V | Completed | Visualizing the dataset involves plotting the dataset using various plots and doing analysis on that. |
| 21/09/2022 | Model Building 1. Building the model using suitable machine learning algorithm 2. Training and testing the model | Syed Akkeal Juniath S A Sakthi Ganesh R Subramanian P Sundhareshwar V | In -Progress | Using certain algorithms to build the model. Those algorithms include 1.Linear regression |

| | | | | |
|------------|---|--|-------------|--|
| 28/09/2022 | Dashboard Creation | Syed Akkeal Juniath S A Sakthi Ganesh R Subramanian P Sundhareshwar V | Completed | Dashboard for visualizing the port status will be developed. |
| 7/10/2022 | Ideation Phase 1. Literature survey on the selected project and information gathering. 2. Prepare the empathy map. 3. Ideation | Syed Akkeal Juniath S A Sakthi Ganesh R Subramanian P Sundhareshwar V | Completed | Start the ideation process |
| 10/10/2022 | Project Design Phase -1 1. Proposed solution. 2. Prepared fit solution 3. Solution Architecture | Syed Akkeal Juniath S A Sakthi Ganesh R Subramanian P Sundhareshwar V | Completed | Prepare the proposed solution document, which includes the novelty, feasibility of idea, business model, social impact, scalability of solution, etc. |
| 12/10/2022 | Project Design Phase -2 1. Customer journey. 2. Functional requirements 3. Data flow diagram. 4. Technology architecture | Syed Akkeal Juniath S A Sakthi Ganesh R Subramanian P Sundhareshwar V | Completed | Prepare the customer journey maps to understand the user interactions & experiences with the application (entry to exit), Functional requirements and construct architecture |
| 31/10/2022 | Project Planning Phase 1. Milestone Activity List 2. Sprint Delivery plan | Syed Akkeal Juniath S A Sakthi Ganesh R Subramanian P Sundhareshwar V | Completed | Prepare milestone activity list and sprint delivery plan for outline of work flow |
| 02/11/2022 | Project Development Phase 1.Sprint -1 2.Sprint-2 3.Sprint-3 4.Sprint-4 | Syed Akkeal Juniath S A Sakthi Ganesh R Subramanian P Sundhareshwar V | In-Progress | Plan of each task sprint to be developed. |

b.Sprint Delivery Plan

| Sprint | Functional Requirement (Epic) | User Story Number | User Story / Task | Story Points | Priority | Team Members |
|----------|-------------------------------|-------------------|---|--------------|----------|--|
| Sprint-1 | Registration | USN-1 | As a user, I can register for the application by entering my email, password, and confirming my password. | 2 | High | Syed Akkeal Juniath S A Sakthi Ganesh R Subramanian P Sundhareshwar V |
| Sprint-1 | | USN-2 | As a user, I will receive confirmation email once I have registered for the application | 1 | High | Syed Akkeal Juniath S A Sakthi Ganesh R Subramanian P Sundhareshwar V |
| Sprint-2 | | USN-3 | As a user, I can register for the application through Facebook | 2 | Low | Syed Akkeal Juniath S A Sakthi Ganesh R Subramanian P Sundhareshwar V |
| Sprint-3 | | USN-4 | As a user, I can register for the application through Gmail | 2 | Medium | Syed Akkeal Juniath S A Sakthi Ganesh R Subramanian P Sundhareshwar V |
| Sprint-4 | Login | USN-5 | As a user, I can log into the application by entering email & password | 1 | High | Syed Akkeal Juniath S A Sakthi Ganesh R Subramanian P Sundhareshwar V |
| | Dashboard | | | | | |

ADVANTAGES & DISADVANTAGES

The spatial distribution of the costs and benefits of port activity further complicate the tasks of attributing impacts, distributing mitigation and compensation, and identifying institutional actors with the willingness and ability to overcome the inevitable collective action problems. Strategies to internalise the externalities of port activity are vital, yet they are also limited by the spatial dynamics and other complexities that come with an activity that has multiple connections to the urban economy. In this context, governance frameworks that include all the relevant actors in the search for collaborative solutions to improve traffic management and planning, but that also have the institutional power to enforce them, are probably more important than any one single intervention. In that spirit, I will conclude with an observation about some common elements of the most promising strategies that are emerging in port-city-hinterland connectivity around the world. In the places where maritime and inland terminal operators, and the transport providers which provide the connective linkages between them, have come together to internalise the costs of some externalities, they have done so because they have been prompted by the political intervention of key stakeholders. For example, the PierPass system in Los Angeles and Long Beach really was a pre-emptive action by terminal operators to avoid even more stringent and potentially unworkable regulation from the state agencies (Giuliano and Linder, 2013). These state agencies in turn were responding to pressures from locally elected representatives, who in turn were responding to the needs of their constituents (Hall, 2007). Likewise, the reservation system, and subsequent actions in Vancouver to compensate truckers for waiting time was the result of strike action by truckers. We have not yet seen the container terminal operating industry take proactive leadership alone in traffic issues beyond the gates, and perhaps this would be an unwelcome intrusion in an urban democracy. However, there are interesting and important examples of action by public authorities, often in partnership with private actors, of traffic planning that works for multiple interest.

CONCLUSION

Indian firms have focused on interconnected and lean supply chains to overcome the supply gaps in normal business operations. The COVID-19 pandemic has led to massive SCDs due to undiscovered supply chain vulnerabilities caused by government-imposed economic restrictions including transportation disruptions worldwide including India, which adversely impacted the normal functioning of the firms. Many Indian firms have experienced severe disruptions in transportation and logistics services, including stronger impact on transportation and logistics data, time delays, and cargo cancellations due to drastically reduced freight capacity, limited mobility, ports shutdown, and problems in routine customs clearances. All this has also severely delayed the production of goods, transport consignments, and logistics services thereby caused massive delays and rerouting to final consumers. The suggested model of robust transport and ALS can be widely used by firms for speedier SCR in the context of economic crises like the COVID-19 pandemic. Over the period, the government has gradually removed most of the restrictions and the firms have made concerted efforts to speedily recover from SCDs, however, inadequate applications of robust TI and ALS have delayed the SCR by the firms. This calls for reviewing current transport and ALS used by firms on priority for speedier SCR. Therefore, the suggested model can be widely applied to address the SCDs using robust intelligence transportation systems and ALS. The challenges and opportunities in operationalizing the suggested model along with optimization of transport and logistics resources should also be considered by the firms.
